Water Wells on St. Thomas, U.S. Virgin Islands

By Judy I. Steiger and Richard Kessler

Abstract

This report presents a compilation of well-inventory data collected between December 1989 and December 1990 on St. Thomas, U.S. Virgin Islands. The report includes maps of well locations and tables of well-inventory data for 367 wells. The demand for freshwater in St. Thomas has exceeded the supply, because of the growth in population and tourism. Currently, the demand for water in St. Thomas is met by desalinated seawater, rainfall collected in cisterns, and ground water. The well-inventory data in this report provides a database to assist hydrologists, water managers, and planners in the development and full utilization of the ground-water resources of St. Thomas.

INTRODUCTION

Freshwater is a scarce and expensive commodity in the U.S. Virgin Islands (USVI) (Gómez-Gómez and others, 1985). To meet the demand for freshwater in St. Thomas, all available freshwater sources are used. In 1984, desalinated seawater provided about 71 percent of the freshwater supplies, and rooftop-rainfall catchments and ground water provided about 19 and 10 percent of the freshwater supplies respectively (Torres-Sierra and Dacosta, 1984).

The U.S. Virgin Islands Water and Power Authority (VIWAPA) is responsible for the supply and distribution of public water for the U.S. Virgin Islands. Because of increases in population and tourism, the development of the water resources of the USVI is becoming more important for the future of St. Thomas. In planning for long-term supply of water for the USVI, VIWAPA is considering all possible sources of water. It is anticipated that carefully planned ground-water development is the key to an inexpensive water supply in the future if ground-water contamination can be identified and controlled.

Purpose and Scope

The U.S. Geological Survey (USGS) entered into a cooperative program with VIWAPA during 1989 to complete a well inventory of St. Thomas, USVI. This report presents data for 367 wells including locations from the completed inventory conducted in St. Thomas between December 1989 and December 1990.

Description of Area

St. Thomas is the second largest of the three principal islands (St. Croix, St. Thomas, and St. John) that comprise the U.S. Virgin Islands (fig. 1). The island is approximately 14 miles long and 2 to 3 miles wide and has an area of 32 square miles. The land surface is almost entirely sloping and extends seaward from a central ridge, which is 800 to 1,200 feet high and runs the length of the island. Flat land is confined to only a few small alluvium-filled embayments and parts of Estate Anna's Retreat and Estate Charlotte Amalie (fig. 2) in eastern St. Thomas (Jordan and Cosner, 1973).

Acknowledgments

The authors express their appreciation to the U.S. Virgin Islands Department of Planning and Natural Resources (VIDPNR), Division of Environmental Protection, for their assistance in helping to locate many of the wells on St. Thomas. Also, the cooperation of the many well and land owners who allowed access to their property and provided information about their wells is gratefully acknowledged.

DATA PRESENTATION

The locations and descriptions of 367 wells constructed before January 1991 on St. Thomas are presented in this report. For ease in locating wells, St. Thomas was divided into 17 grids (fig. 1). All grids shown in figure 1 are presented as separate figures in this report (figs. 3 through 19). Each grid represents a two-minute square section of the USGS 1982 photorevised, 7.5 minute series, topographic maps of St. Thomas. Each figure is published at the original topographic map scale of 1:24,000. Some grids cover areas in which no wells exist.

Grids that have wells located on them are followed immediately by a table containing selected well data (tables 2 through 12). When available, information presented in these tables includes: well number as referenced on the preceding figure, well name, primary use of water, year the well was constructed, reported depth of well, measured depth of well, well casing diameter, type of well finish and finish interval, land-surface altitude at well site, depth to water below land-surface datum, date water level measured, and yield of well. The well numbers used in tables 2 through 12 consist of two parts. The first part refers to the grid number from figure 1, and the second part is a sequence number for the well within the grid. These numbers apply only to wells located on the accompanying figure. Identifiers mentioned in other reports can be identified by the site-identification numbers, which are presented in appendix A. The site-identification numbers conform with the established USGS Ground-Water Site Inventory classification scheme. The site-identification number does not change and can be used to reference a specific well in other USGS publications.

The report also identifies the location of wells in terms of Estates in St. Thomas (fig. 2, table 1, and appendix A). Other information included in this report are the subsurface lithologic descriptions (when available) of a well site, and any special information about a well (appendix B).

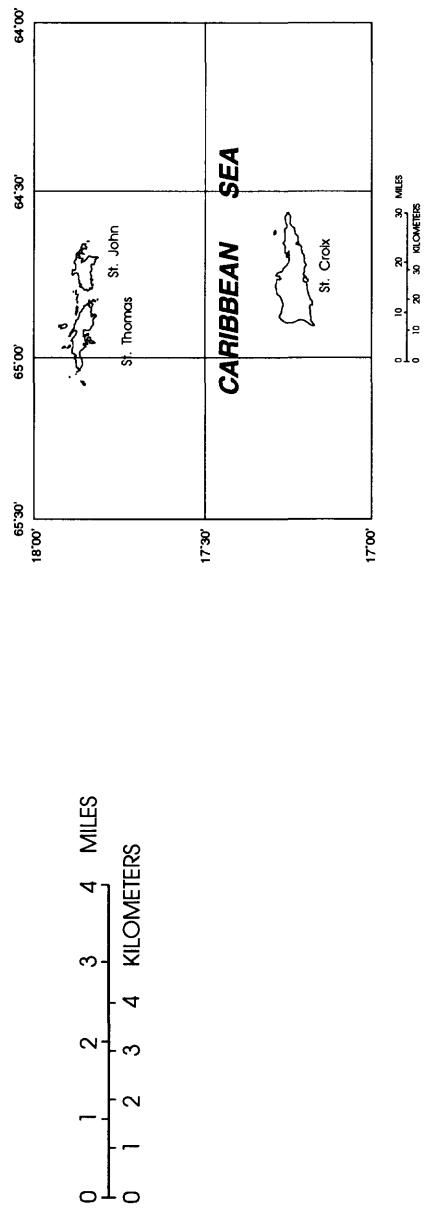

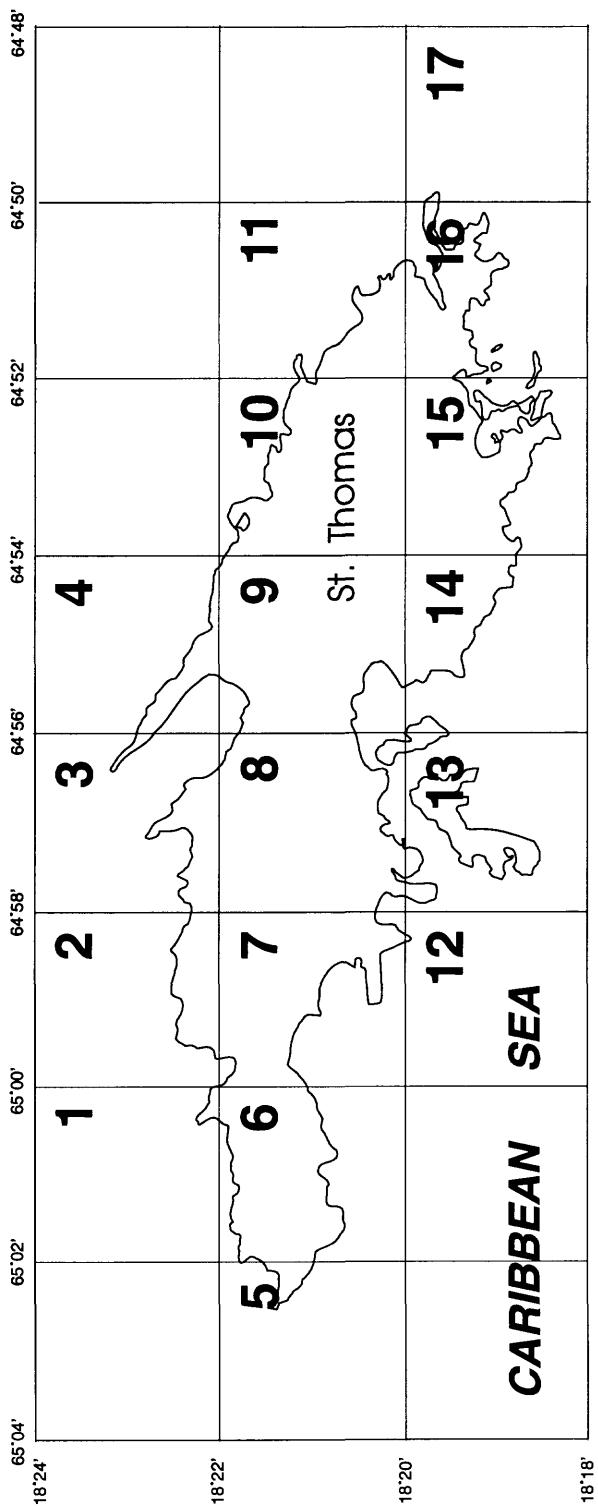

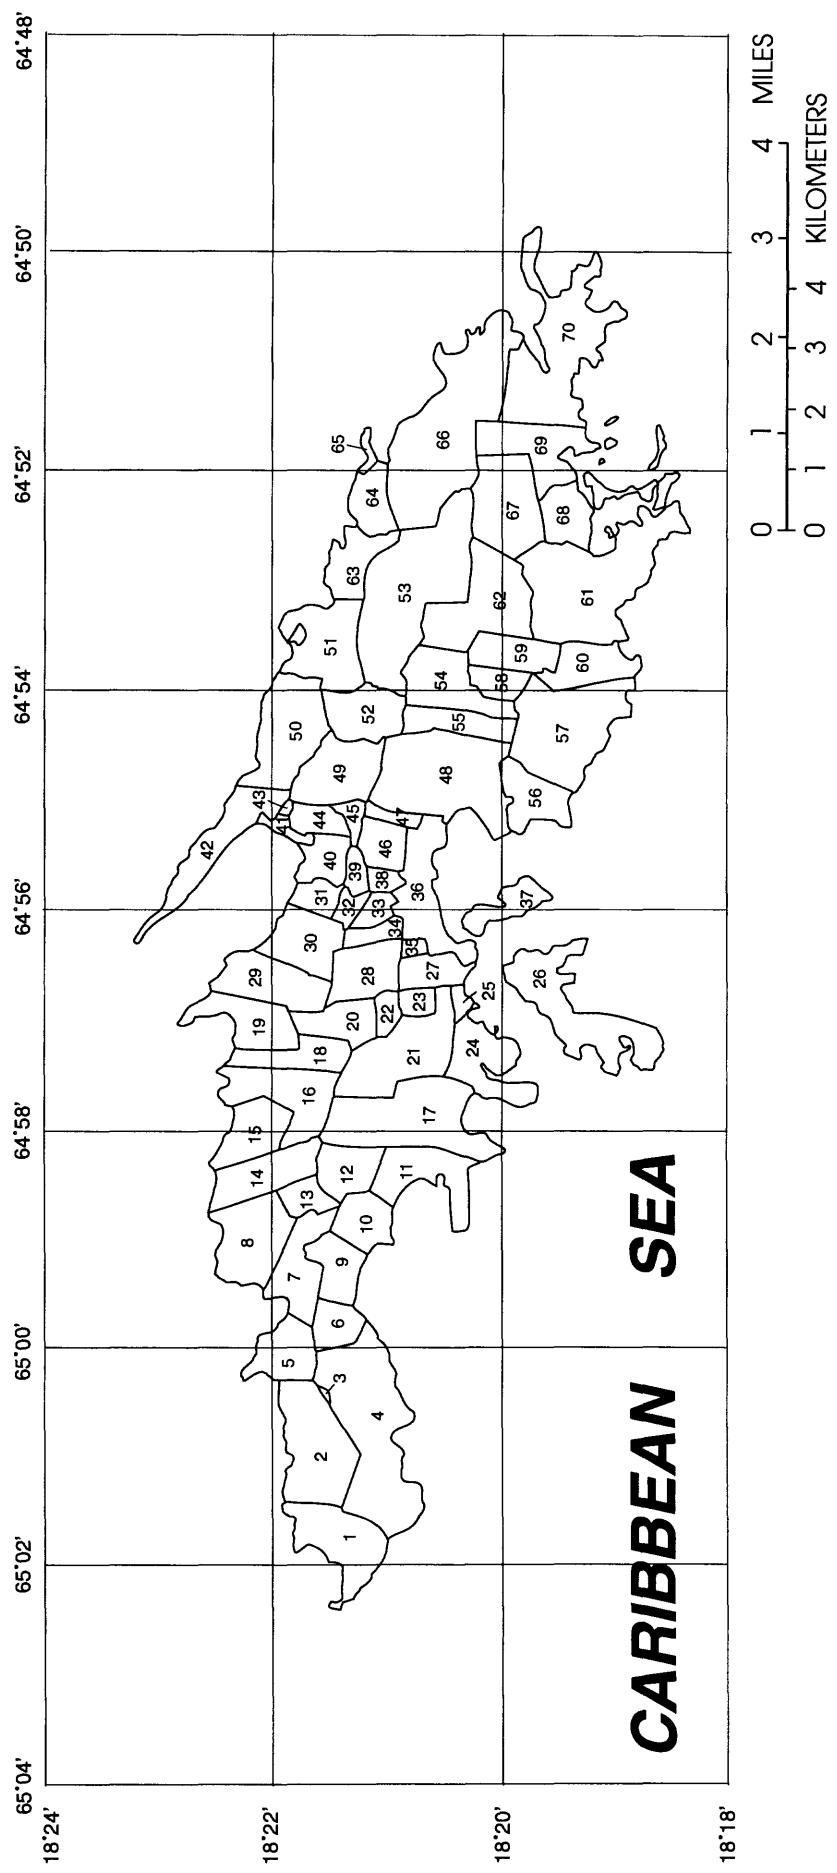

Figure 1. Location of St. Thomas and area grids.

EXPLANATION

ESTATE AND ESTATE NUMBER-Estate name is shown on table 1.

Figure 2. Location of the Estates of St. Thomas.

31	Misgunst	66	Smith Bay
32	Elizabeth	67	Mariendahl
33	Agnes' Fancy	68	Nadir
34	Staabí	69	Frydenhøj
35	Anna's Fancy	70	Nazareth

¹ The Estate number applies only to this report.

Records of wells in St. Thomas were complied from the USGS historical files, VIDPNR files, previously published reports (Robison and others, 1973; Stevens and others, 1981; Graves and González, 1988), and verbal reports of well locations. These records were used to locate wells in the field. All the wells presented in this report have been verified and inventoried by USGS personnel.

Lithologic information and information about the construction of the wells was taken from well-drillers' logs, when available. Wells that could be sounded with a weighted steel tape were measured for depth by USGS personnel. Some of the information on well depths and type of well finish were provided by the well owner or were reported on previous well inventories.

Well casing diameters represent the inside diameter of the casing visible at land surface. In some instances, there may be a smaller diameter casing within the well. The smaller diameter casing is noted in the remarks section of the table.

Land-surface altitudes at the well site were estimated from USGS topographic maps. The contour interval of the topographic maps of St. Thomas is 40 feet. Twenty-foot contour intervals are shown where slopes are low. The accuracy of reporting land-surface altitudes in this report is considered to be half of the contour interval used.

Depth-to-water measurements were made by USGS personnel. Yields were reported by the driller or estimated by the well owner or well manager. Wells that were pumping and had in-line flow meters were measured for yield by USGS personnel.

Appendix B. Lithologic descriptions and remarks for wells on St. Thomas, U.S. Virgin Islands
 [--, indicates data not available]

Well number	Figure number	Lithologic description and depth interval (feet)	Remarks
2- 1	4	Unconsolidated material 0-18 Bedrock 18	Owner estimated daily pumpage is 1,300 gallons.
3- 1	5	--	--
3- 2	5	--	--
3- 3	5	Unconsolidated material 0-45 Bedrock 45	Well is plugged at 25 feet.
3- 4	5	--	Water-level data for 1963-65 available under "Well 4" in Robison and others, 1973.
3- 5	5	--	Well used in supply of condominiums. Well owned by D and C Development.
3- 6	5	Unconsolidated material 0-30 Bedrock 30	--
3- 7	5	Unconsolidated material 0-26 Bedrock 26	Owner estimated daily pumpage is 10,000 gallons. Well could pump 40,000 gallons per day. Well used in supply of condominiums. Well owned by D and C Development.
3- 8	5	Unconsolidated material 0-55 Bedrock 55	--
3- 9	5	Unconsolidated material 0-30 Bedrock 30	--
3-10	5	--	--
3-11	5	--	--
3-12	5	--	--
3-13	5	--	Well constructed in early 1970's.
3-14	5	--	Well constructed about 1985.
3-15	5	--	--
3-16	5	Unconsolidated material 0-12 Bedrock 12	--
6- 1	8	--	Well dug in 1964 or 1965. Owner estimated daily pumpage is 5,000 gallons.
7- 1	9	--	Well dug about 1750.
7- 2	9	--	--
7- 3	9	--	--
7- 4	9	--	--
7- 5	9	--	--
7- 6	9	--	Maintenance personnel estimated daily pumpage is 20,000 gallons.

Appendix B. Lithologic descriptions and remarks for wells on St. Thomas, U.S. Virgin Islands--Continued
 [-, indicates data not available]

Well number	Figure number	Lithologic description and depth interval (feet)	Remarks
7- 7	9	Unconsolidated material 0-14 Bedrock 14	--
7- 8	9	--	Maintenance personnel estimated daily pumpage of University of Virgin Islands wells 1 and 2 is 40,000 gallons.
7- 9	9	--	--
7-10	9	--	--
7-11	9	--	--
7-12	9	--	--
7-13	9	--	--
7-14	9	--	Well dug in the 1940's. Water-level data for 1962-68 available under "Well 44" in Robison and others, 1973.
7-15	9	--	--
7-16	9	--	--
7-17	9	--	--
7-18	9	--	--
7-19	9	--	--
7-20	9	--	--
7-21	9	Unconsolidated material 0-23 Bedrock 23	Well pumped dry after 7 hours at 6 gallons per minute. Water-level data for 1963-69 available under "Well 43" in Robison and others, 1973.
7-22	9	Unconsolidated material 0-22 Bedrock 22	U.S. Geological Survey observation well from March 1982 to present.
8- 1	10	--	Well drilled around 1980. Owner reports daily pumpage is less than 100 gallons.
8- 2	10	--	Water-level data for 1963-69 available under "Well 2" in Robison and others, 1973.
8- 3	10	--	--
8- 4	10	Unconsolidated material 0-40 Bedrock 40	--
8- 5	10	--	Owner reported daily pumpage is 300-400 gallons.
8- 6	10	--	--
8- 7	10	--	--
8- 8	10	Unconsolidated material 0-5 Bedrock 5	--

Appendix B. Lithologic descriptions and remarks for wells on St. Thomas, U.S. Virgin Islands--Continued
 [--, indicates data not available]

Well number	Figure number	Lithologic description and depth interval (feet)	Remarks
8- 9	10	--	Owner reports weekly pumpage of 170 gallons.
8-10	10	--	Owner reported yield of 5-15 gallons per minute in dry season and 10-15 gallons per minute in the wet season.
8-11	10	Unconsolidated material 0-26 Bedrock 26	--
8-12	10	--	Well drilled in the late 1970's. Owner estimated daily pumpage is 80-120 gallons.
8-13	10	Unconsolidated material 0-14 Bedrock 14	--
8-14	10	Unconsolidated material 0-34 Bedrock 34	--
8-15	10	--	Well drilled in 1980's.
8-16	10	--	Well drilled early 1980's.
8-17	10	--	--
8-18	10	Unconsolidated material 0-10 Bedrock 10	Driller reported well as dry.
8-19	10	--	Well blocked at 25 feet. No water level.
8-20	10	Unconsolidated material 0-40 Bedrock 40	--
8-21	10	--	Well was dug about 1955. Well is capped.
8-22	10	--	--
8-23	10	--	Well was dug before the 1900's.
8-24	10	--	--
8-25	10	Unconsolidated material 0-4 Bedrock 4	--
8-26	10	Unconsolidated material 0-13 Bedrock 13	--
8-27	10	--	Well was cleaned out and new 4-inch PVC pipe installed in 1983.
8-28	10	--	--
8-29	10	Unconsolidated material 0-24 Bedrock 24	Pumping water level is 60-62 feet. Well used in supply of apartments.
8-30	10	--	Depth to water is approximately 31 feet.
8-31	10	--	--
8-32	10	--	--
8-33	10	--	--

Appendix B. Lithologic descriptions and remarks for wells on St. Thomas, U.S. Virgin Islands--Continued
 [-, indicates data not available]

Well number	Figure number	Lithologic description and depth interval (feet)	Remarks
8-34	10	--	Depth reported to be between 90 and 110 feet with 4-inch casing inside of 6-inch casing.
8-35	10	--	--
8-36	10	--	Owner reports an estimated daily pumpage of 380 gallons.
8-37	10	--	--
8-38	10	--	--
8-39	10	--	--
8-40	10	--	--
8-41	10	--	Well dug around 1929.
8-42	10	Unconsolidated material 0-20 Bedrock 20	Water is also used for small laundry on site. 4-inch casing is inside 6-inch casing.
8-43	10	Unconsolidated material 0-15 Bedrock 15	--
8-44	10	--	Well used in supply of 23 apartments.
8-45	10	Unconsolidated material 0-8 Bedrock 8	Well drilled in the early 1980's.
8-46	10	--	Owner reported well yield as trace.
8-47	10	--	Well drilled in the 1970's, and depth is reported to be between 55 and 60 feet.
8-48	10	--	--
8-49	10	Unconsolidated material 0-15 Bedrock 15	Well drilled in the early 1980's.
8-50	10	--	--
8-51	10	--	Well was dug before 1900.
8-52	10	--	Casing diameter is approximately 3 feet.
8-53	10	--	Outside diameter is 10 feet and depth is reported to be between 30-35 feet.
8-54	10	--	--
8-55	10	--	--
8-56	10	--	--
8-57	10	--	--
8-58	10	--	Well was dug mid-1700's.

Appendix B. Lithologic descriptions and remarks for wells on St. Thomas, U.S. Virgin Islands--Continued
 [--, indicates data not available]

Well number	Figure number	Lithologic description and depth interval (feet)	Remarks
15-43	17	--	Well was constructed about 1970. Well casing is 3.5 feet by 2.5 feet. Well used in supply of 5 apartments.
15-44	17	--	--
15-45	17	--	--
16- 1	18	--	Well reported drilled in early 1960's.
16- 2	18	--	Well reported drilled about 1980. Reported depth is 65-70 feet.
16- 3	18	Unconsolidated material 0-20 Bedrock 20	--
16- 4	18	Unconsolidated material 0-37 Bedrock 37	Water-level data for 1962-68 available under "Well 13" in Robison and others, 1973.
16- 5	18	Unconsolidated material 0-30 Bedrock 30	--
16- 6	18	--	--
16- 7	18	--	Well dug in the early 1910's.
16- 8	18	--	--
16- 9	18	Unconsolidated material 0-18 Bedrock 18	--
16-10	18	--	Reported 4-inch slotted casing from 0 to 200 feet.
16-11	18	--	--
16-12	18	--	Well drilled in late 1970's. Well may have caved in to 75-80 feet.
16-13	18	Unconsolidated material 0-7 Bedrock 7	--
16-14	18	Unconsolidated material 0-1 Bedrock 1	Company president estimated daily pumpage is 3,000 gallons.
16-15	18	--	--
16-16	18	--	Well drilled about 1980.
16-17	18	Unconsolidated material 0-10 Bedrock 10	--
16-18	18	Unconsolidated material 0-20	--
16-19	18	--	Sand filter on bottom of casing. Maintenance personnel estimated daily pumpage is 40,000 gallons.
